Legends of Bermuda

The stories of Flight 19, a group of five US torpedo bombers that disappeared in the triangle in 1945, are part of the Bermuda triangle legends. A rescue aircraft was also missing to find them.

Altogether, as far as we know, **75+ planes and hundreds of ships met their demise in the Bermuda Triangle**. Possible causes for the catastrophes have been proposed over time, ranging from the paranormal, electromagnetic interference that causes compass problems, bad weather, the gulf stream, and large undersea fields of methane.

Best Theory so far on basis of AI

Meteorologists have suggested a fascinating theory that 170 mph air bombs full of wind are responsible for the mysteries pervading the Bermuda Triangle. These air pockets are causing all the malfunctions, sinking and falling aircraft.
